 ABHINITH WOONNA
 (2023025)
- 1. DISCOVER: It has a mind map depicting the thing that goes in a user's mind while he/she is looking for a housekeeper.

https://miro.com/app/board/uXjVMp5wLhM=/?share link id=667799756409

2. DEFINE: It has a mental model that clearly depicts how a user is going to hire a housekeeper for their home,

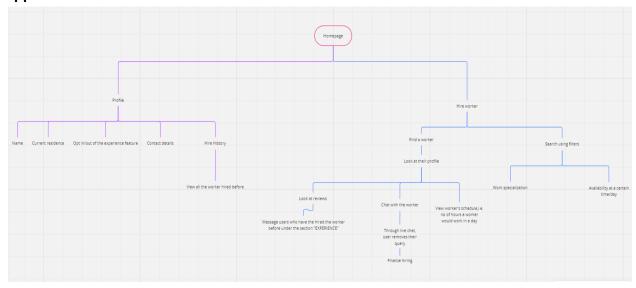

3. DEVELOP: It includes brainstorming ideas about the app. It clearly tells what all features have to be included in the app which enhances user experience.

The app should ask The app should The app should The app should about the time ask about the provide a section ask user about period of hire and work for which called "History" their location the exact date from where users can see the user wants to which the users where they are a list of workers hire temporary want housekeeper currently living which they hired worker to work App should have an addition feature for The app should inform The app should provide each housekeeper called "experience" users about the total a detailed background where users can amount which users (including age)of the have to pay to know about those people who had hired keeper so that user company in order to that particular keeper, duration for the could gain information hire a housekeeper hire etc. User should also be able to chat about them prior to booking with the above mentioned people The app should The app should The app should pre-The app should provide have a filtering offer a live chat inform users about the a section of "Reviews" option where user facility to users payment structure. Like for each housekeeper how much they have to can filter where they can so that users can know housekeeper based directly chat with about previous users monthly/quarterly/year on start date and housekeeper to reviews and rating their availability. remove any query
